No one **understands the NHS** better

Database of Private Hospital Management

Private hospitals in the UK provide medical services to patients outside of the NHS structure. They are normally owned by private or non-forprofit organisations and offer healthcare privately funded by either patient's themselves by insurance companies or more recently commissioned via the NHS.

Personnel working in private healthcare may either work exclusively at one or more private hospitals or split their time with across both private and NHS care.

Our Database of Private Hospitals provides access to key management stakeholders working in private healthcare.

Clinical Healthcare Professionals e.g. Doctors and Nurses and their specialties can be found in the Hospital Doctors and Specialist Nurses data products.

All information within the database is regularly verified and updated by our specialist team of product researchers; giving you the quality, targeted data you need and the reassurance that you will be GDPR compliant.

Database Contents: **2,985**

The data can be segmented to enable targeting campaigns by:

- Geography
- Job Responsibility
- Region

For the most up-to-date counts or to speak to us about our Campaign Packages, please contact your account manager direct or use the contact us form on this site.

Please note: It is common for a healthcare professional to have more than one responsibility. Therefore, there may be fewer named individuals on the database than there are areas of responsibility indicated above. Counts provided will be deduped to provide 'unique' contacts. Number of contacts may vary during our research cycle due to the fast-paced rate of change of organisations changes within UK healthcare. Counts correct at time of publishing December 2025.
